Brahmanand Suryawanshi

Backend Developer & Software Tester

Python · Django · DRF · PostgreSQL | Java · Selenium WebDriver · TestNG · Postman

Navi Mumbai, Maharashtra · +91 90210 24383 · brahma9021@gmail.com · linkedin.com/in/brahma-s4383 · github.com/Brahma4383

SUMMARY

Backend developer and software tester who works on both sides of the same software. Builds REST APIs and ERP modules with Python, Django, Django REST Framework and PostgreSQL, and tests web applications by hand and with automation in Java, Selenium WebDriver and TestNG: writing test scenarios and test cases, running functional, regression, smoke and sanity tests, testing APIs in Postman and checking the data with SQL. Building the code makes the testing sharper, and testing it makes the code better.

TECHNICAL SKILLS

Backend Development: Python, Django, Django REST Framework, REST APIs, PostgreSQL, MySQL, SQL

Automation Testing: Selenium WebDriver, Java, TestNG (DataProvider, listeners), Page Object Model, Page Factory, Maven, Apache POI, XPath & CSS locators, explicit waits, Actions & JavaScriptExecutor, cross-browser runs, Playwright

Manual & API Testing: Functional, regression, smoke & sanity, integration & system, UI & cross-browser testing; boundary value analysis, equivalence partitioning; defect life cycle, STLC, SDLC; Postman

Programming: Core Java (OOP, Collections), Python, JavaScript, React

Tools & Methods: Git & GitHub, Jira, Jenkins (basics), Chrome DevTools, Agile / Scrum

EXPERIENCE

Backend Developer (Development & Testing) Feb 2026 – Present

Shubham Tanks And Liners Pvt. Ltd., Thane, Maharashtra

- **Development:** Build and maintain ERP modules and REST APIs with Python, Django, DRF and PostgreSQL in Agile sprints, designing and optimising backend logic and database queries for performance, scalability and security.
- **Manual testing:** Write and run functional, regression and smoke test cases for each module before release.
- **Automation:** Automate regression checks for key ERP workflows with Selenium WebDriver, Java and TestNG.
- **API & database testing:** Test the ERP APIs in Postman and verify saved data with SQL queries.
- **Defect handling:** Reproduce production issues, log defects with steps and screenshots, then fix and retest them.

PROJECTS

School Management System Role-based school portal — Python, Django, MySQL · Selenium, Java, TestNG

- **Built:** Full-stack portal for admins, teachers and students: attendance (with bulk CSV upload), assignments, exam results and performance tracking, using Python, Django and raw SQL on MySQL.
- **Tested:** Hybrid Selenium framework (Java, TestNG, Maven, Page Object Model) for login, attendance and assignments; data-driven tests (DataProvider, Apache POI) check role-based access for every user; listeners capture screenshots on failure and produce HTML reports; smoke and regression suites run on Chrome, Firefox and Edge.

Ticket Booking Platform Multi-service bookings — Python, Django, MySQL · Selenium, Postman

- **Built:** One user account for train, bus, cab, hotel and flight bookings, with booking data kept in one consistent format across every service; Python, Django and MySQL with a TypeScript front end.
- **Tested:** End-to-end search, booking and cancellation flows for all five services. Automated the key flows with Selenium and Java (dropdowns, date pickers, multiple windows and alerts) and tested the booking APIs in Postman for status codes, response data and negative cases.

DayFlow Personal productivity app — Python, Django, DRF, MySQL, React · Postman

- **Built:** One dashboard for tasks, habits, notes and a focus timer, with progress reports: a Django REST Framework API on MySQL with a React front end, set up for deployment on Vercel.
- **Tested:** Postman collection of 72 API requests with 148 automated checks across auth, tasks, habits, focus sessions and the dashboard, including negative cases: duplicate emails, weak passwords, missing tokens, invalid filters and completing a habit twice.

Banking Management System Accounts & transactions — Python, Django, SQL · Manual testing

- **Built:** Account creation, deposits, withdrawals and fund transfers between accounts, with security checks around every transaction so balances stay accurate; Python, Django and SQL.
- **Tested:** Test scenarios and test cases for every transaction type using boundary value analysis and equivalence partitioning (zero, negative and over-balance amounts); functional, negative and regression testing, balances verified in the database with SQL, and defects logged with severity and priority.

EDUCATION & CERTIFICATIONS

B.E. in Computer Science & Design University of Mumbai — 2022 – 2025

Diploma in Information Technology MSBTE — 2019 – 2022

Data Analytics QSpiders — Jul – Nov 2025

Python Programming & SQL Anudip Foundation — Jan 2025

Languages: English, Hindi, Marathi
